

Communicating with NEXEO | HDX™ Voice Commands

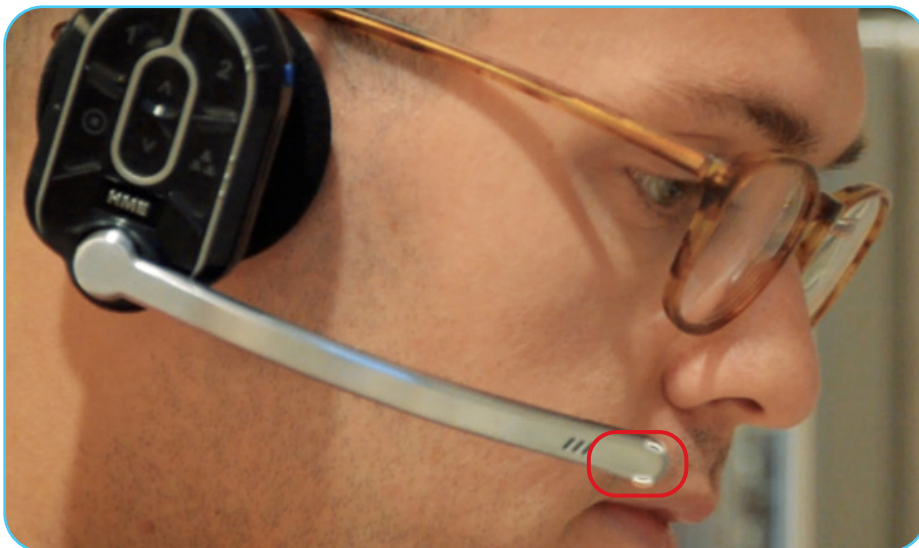

More than just a wireless system, the NEXEO Platform enables group conversations, provides an interactive base station display, and delivers the latest generation of HDX audio. Our voice command system enables your crew to initiate base station and headset functionality without lifting a finger. Think of it as NEXEO's personal assistant! With an extensive list that will continue to grow, your crew will work, and communicate, in a faster and more convenient way.

1. Place the microphone boom close to your mouth to deliver the best sound quality.
2. To start using Voice Commands, say, "**OK, NEXEO!**" to wake up the assistant.

Note: You need to wake up the assistant before **each** command by saying, "OK, NEXEO!" The best way for your voice to be recognized is to speak at your normal speed.

3. After "**OK, NEXEO!**" is recognized, you will hear a tone and a **white LED** on the end of the headset boom will illuminate to alert you that NEXEO is listening for your voice command.

4.
 - For example, if your headset is enrolled in the Drive Thru **Lane 1** Group and you want to immediately speak to a guest at the speaker in **Lane 2**, start by saying, “**OK, NEXEO, TALK to Lane 2!**” to establish a two-way connection.
 - NEXEO will respond: “**Lane 2.**”
 - If you want to connect and **ONLY listen** to the speaker post, you can say “**OK, NEXEO, Lane 1!**” or “**OK, NEXEO, Lane 2!**”

Note: If your Voice Command is **not** recognized within **10 seconds**, you will hear a tone indicating that you need to try your Voice Command again.
5. You can adjust the headset **volume** to your preference with a command from **1** to **15** by saying “**OK, NEXEO, Volume 5!**”

5. For the latest list of Voice Commands, please view our **NEXEO | HDX Voice Commands** Supporting Document in the HME Training Portal.

NEXEO | HDX will continue to grow alongside your crew and customers. Welcome to the future of Quick Service Restaurant communications!
